# HIGH PROBABILITY TRADES

## Commodities:

- **Price Analysis of Gold (XAU/USD)** Projected high and low: 3 years till 31st December (2016,2017,2018) :1379-728,2 years till 31st December (2017,2018) : 1366-1036,Yearly 31st December (2018) : 1436 – 1224,Half yearly till 30th June (Jan-June) :1406-1254,Nine months till 31st December (April -December):1426-1265, Six months till 30th September (April -September) : 1410-1281,Quarterly till 30th June (April - June) : 1377-1314, **Strategy for long term traders till 31st December 2018: Go short in gold @ 1366-1436 with stop of 1437 on day closing basis with downside target of 1314-1281-1265-1254-1224-1036-728. I won't be surprised if gold falls to \$728 by 31<sup>st</sup> December 2018..if I look further it indicates 4 year projected high and low (year 2015,2016,2017,2018) 1552-764 & 5 years projected high and low (year 2014,2015,2016,2017,2018) 2123-1004. Another important point to be noted is 3 years projected high for year 2016,2017 & 2018 was \$1379 and so far since year 2016 gold has made its high right there @1376 in July 2016 and from there we saw straight fall of \$250 points in immediate next 6 months by December 2016. If we closely look at the above analysis we will see all the short term price analysis is indicating gold should made an important high around @\$1377-1406-1410-1426-1436 .Gold is trading now @1370 so **upside is very limited, on the higher side it can go max \$7 to \$66 points but on downside it can fall \$300-600 points** .Along with price analysis we will also strictly follow the day wise trend forecast and top-bottom analysis of gold, so that we don't miss the opportunity and we don't get trapped . We need to pay attention to the 2 years; 3 years, 4 years and 5 years calculation **which is indicating gold should at least fall to \$1036-1004 (ideally \$764-728) in year 2018**. If I look further it indicates. projected high and low for 7 years (2012, 2013, 2014, 2015, 2016, 2017, 2018) \$2494-991.This projected low of \$991 is very close to the projected low of 5 years that is \$1004 and also very close to projected low of 2 years that is \$1036.So it indicates as soon as gold hits the price window of \$1036-991 from there we will see strong bull rally for 4-6 months. Now if look at the top bottom analysis of gold for year 2018 prepared and sent on 7th December 2017. **Top-Bottom chart is indicating that from mid of May 2018 to mid of November 2018 (especially Mid May-Mid July 2018) is going to prove disaster for gold**. But along with this top bottom analysis I strongly suggest to follow the day wise trend forecast of gold given in the weekly newsletter which is more precise and more accurate. We will patiently wait till the time and price comes together for ideal short position which I will keep updating in the subscribers group. **There will be very powerful and significant bearish alignment of Saturn and lunar node between May-July 2018 which will bring gold prices significantly lower**. if we do more longer term price analysis Projected high and low for 5 years (2016,2017,2018,2019,2020) \$1491-\$616,Projected high and low of decade (year 2011-2020) \$2015-\$840.If we see all the calculations together it is **reconfirming that long term trend is down & gold is going lower and lower in coming months and years**. Soon I will prepare the crash index of gold for year 2018-2020 to identify where this expected gold crash may happen.**

- **Coffee price analysis:** Price analysis of coffee is indicating an interesting set up. If I look at decade price analysis of coffee for year 2011-2020 **it is indicating the high and low of this decade (2011-2020) is already in.** So far since 1st Jan 2011 the high of coffee is 306.25 and low is 100.95 which fits almost 100% with my decade price analysis, but as coffee is already trading near the decade low (trading now @117) and **my trend analysis is indicating lower prices in coming months**, we have to consider the midterm and short term price analysis as well. **Short term and midterm price analysis is indicating that 147 is the biggest hurdle for coffee till December 2020.** But as mentioned earlier I need to wait till June 2018 to confirm this view. **There is a strong possibility that coffee won't be able to give a daily close above 142 in entire 2018** (so far high of year 2018 is 131.35). 1 year price analysis is indicating coffee may fall to 97.63, 2 years price analysis is indicating coffee may fall to 83.09 in year 2018. 28 months price analysis is indicating coffee can fall to 81.82 by 31st December 2020. Now if I look at the 3 years price analysis the projected high and low for year 2016,2017 & 2018 is 176.10-51.55 and interestingly so far high since 1st January 2016 (till date ) is 176 which nailed the projected high, so if we go by 3 years price analysis as it nailed the High so it indicates coffee should fall to 51.45 in year 2018. I may sound crazy if I share with you my 4 years analysis , 5 years (backward and forward ) analysis . **All three analyses are indicating coffee may fall to \$21 by 31st December 2020 (probably as early as by 31st December 2018).** The only hope We can see in coffee is, as mentioned at beginning as per decade analysis high and low of decade is already in
- **Crude oil Price Analysis :** 78.26 is 3 years projected high (till 2018).84.05 is 4 years projected high (till 2018).80.86 is 5 years projected high (till 2018) .So I am convinced that's crude oil won't be able to go above 84.05 (ideally not above 80.86 most ideally not above 78.26) in year 2018. Immediately 74.60 is the most important level for crude oil . Low is in oil @64.22 upside target 71.24 / 74.58 by 2<sup>nd</sup> July

 Considering all the above calculation my view is that stock fortis healthcare should trade between 105.15 -230.90 by 31st December 2020. That means this stock should not fall below 105.15 in next 33 months neither it should go above 230.90 in next 33 months .This stock is currently trading now @128(cash price ) so every fall to 105.15 is great buying opportunity with upside target of 230.90 with stop of 105.10 on day closing basis .
