Price Analysis of Gold (XAU/USD) Projected high and low: 3 years till 31st December (2016,2017,2018) :1379-728,2 years till 31st December (2017,2018) : 1366-1036,Yearly 31st December (2018) : 1436 – 1224,Half yearly till 30th June (Jan-June) :1406-1254,Nine months till 31st December (April -December):1426-1265, Six months till 30th September (April -September) : 1410-1281,Quarterly till 30th June (April - June) : 1377-1314,Monthly till 30th April (April) :1368-1314, **Strategy for long term traders till 31st December 2018: Go short in gold @ 1366-1436 with stop of 1437 on day closing basis with downside target of 1314-1281-1265-1254-1224-1036-728.** I won't be surprised if gold falls to \$728 by 31st December 2018..if I look further it indicates 4 year projected high and low (year 2015,2016,2017,2018) 1552-764 & 5 years projected high and low (year 2014,2015,2016,2017,2018) 2123-1004. Another important point to be noted is 3 years projected high for year 2016,2017 & 2018 was \$1379 and so far since year 2016 gold has made its high right there @1376 in July 2016 and from there we saw straight fall of \$250 points in immediate next 6 months by December 2016. If we closely look at the above analysis we will see all the short term price analysis is indicating gold should made an important high around @\$1377-1406-1410-1426-1436 .Gold is trading now @1370 so upside is very limited, on the higher side it can go max \$7 to \$66 points but on downside it can fall \$300-600 points .Along with price analysis we

will also strictly follow the day wise trend forecast and top-bottom analysis of gold, so that we don't miss the opportunity and we don't get trapped . We need to pay attention to the 2 years; 3 years, 4 years and 5 years calculation which is indicating gold should at least fall to \$1036-1004 (ideally \$764-728) in year 2018. If I look further it indicates. projected high and low for 7 years (2012, 2013, 2014, 2015, 2016, 2017, 2018) \$2494-991.This projected low of \$991 is very close to the projected low of 5 years that is \$1004 and also very close to projected low of 2 years that is \$1036.So it indicates as soon as gold hits the price window of \$1036-991 from there we will see strong bull rally for 4-6 months. Now if look at the top bottom analysis of gold for year 2018 prepared and sent on 7th December 2017. Top-Bottom chart is indicating that from mid of May 2018 to mid of November 2018 (especially Mid May-Mid July 2018) is going to prove disaster for gold. But along with this top bottom analysis I strongly suggest to follow the day wise trend forecast of gold given in the weekly newsletter which is more precise and more accurate. We will patiently wait till the time and price comes together for ideal short position which I will keep updating in the subscribers group. There will be very powerful and significant bearish alignment of Saturn and lunar node between May-July 2018 which will bring gold prices significantly lower. if we do more longer term price analysis Projected high and low for 5 years (2016,2017,2018,2019,2020) \$1491-\$616,Projected high and low of decade (year 2011-2020) \$2015-\$840.**If we see all the calculations together it is reconfirming that long term trend is down & gold is going lower and lower in coming months and years.** Soon I will prepare the crash index of gold for year 2018-2020 to identify where this expected gold crash may happen.

I doubt gdx will be able to go above 25.66 in year 2018,25.43 is the strongest Astro resistance till 30th June 2018.Immediately 22.26 is the strongest Astro resistance ,But if I look at the long term picture in case gdx falls to 16.66 it is a great buying opportunity with upside target of 36.05.As immediately I am expecting uptrend in precious metals till 19th/20th of April in case gdx hits there 25.43-25.66 go short with stop of 26.89 on day closing basis
- **Stock Oracle Corporation (ORCL) (NYSE)** 2 years projected low is 41.89,Annual projected low is 42.79,Half yearly projected low is 44.07,we are long @44.78 with stop of 44

- **Stock Fortis healthcare (NSE/BSE)** cash price
 Projected high and low:
 3 months till June 147.30-83.15
 6 months till September 147.30-83.15

 5 years till December 208.65-81.40
 5 years (2016 to 2020)251.82-128.02
 Considering all the above calculation my view is that stock fortis healthcare should trade between 105.15 -230.90 by 31st December 2020. That means this stock should not fall below 105.15 in next 33 months neither it should go above 230.90 in next 33 months .This stock is currently trading now @128(cash price) so every fall to 105.15 is great buying opportunity with upside target of 230.90 with stop of 105.10 on day closing basis . In case all my calculations go wrong and this stock closes below 105.10 it will crash straight to 83.00

If NIIT gives a daily close below 83.70 it will confirm it is heading to yearly projected low of 72.05 and once its gives a daily close below 72.05 it will confirm it is heading to 2 years projected low of 46.10,immediately we have to watch the level of 83.70 (cash price NSE) closely .
